

# MineARC Cooling Vest

MineARC's new cooling vest provides a unique solution to keeping core body temperature low whilst working in hot, confined environments.

Simple and easy to use, the vest is lightweight and available in a range of sizes; providing effective and immediate cooling for personnel in conditions of up to 50°C.

Cooling is achieved by circulating chilled water throughout the in-built medical grade tubing within the vest, which is connected via a 3m hose to a small compressor. Quick release brass fittings allow the wearer to disconnect and reconnect to the cooling compressor for added flexibility.

- ✓ Ideal for personnel in hot, confined environments
- ✓ Various sizes available to suit all personnel
- ✓ Lightweight, elastic material
- ✓ Brass connection fittings
- ✓ Works in environments up to 50°C
- ✓ Five settings for added temperature control
- ✓ Works best when worn under clothing

## Options

---

- ✓ Longer 5m hose
- ✓ Hose with splitter, allowing two vests to operate from one compressor
- ✓ 24VDC or 240V power options
